

Training made in Germany – Potentials and possibilities from a Berlin perspective

Dr. Stefan Wolf

1. Congress KNOW-TT, Campus El Gouna, 26.10 – 28.10.2013

Overview

This short presentation will give some notes on the possibilities of transfer from Berlin to Egypt to support the transformation process in the society by exchange and knowledge transfer in the field of professional education. I will say some words on the following issues:

- The concept of certification we develop in the project WEB-TT as an example to secure the quality of in-company training
- The high level of Berlin professional schools the so called Oberstufenzentren as an resource to improve the quality of selected Technical Secondary Schools in Egypt in selected professional fields
- Capacity development of selected actors and organisational structures by vice-versa interchanges
- Personal capability development in professional and pedagogical fields by focused further education courses on short time level

The certification concept

- The certification concept of WEB-TT grounds in the adapted transfer of German legal regulation to the Egyptian conditions
- Nevertheless it secures the quality of the German training system by close involvement of German Chamber of Crafts or institutions who are legally authorised to enact training regulation. In WEB-TT e.g. it will be chamber of crafts from Osnabrueck.
- We depict the German process of a TVET exam and the tied certification but adapted to the Egyptian condition.

The high level of professional schools in Berlin

- Start with a political process to establish in different professional fields specifically needed in Egypt e.g. Mechanics or mechatronics or health care or et al. to establish a interchange and erect an interrelation between Egyptian and Berlin Professional schools.
 - i.e. to improve the professional knowledge of Egyptian TSS teachers by internship in Berlin Professional Schools
 - To support the administration of Egyptian TSS by interchanges with Berlin School principals
 - The establish a system of twinning structure on personal base in the schools between the Egyptian and the Berlin side
 - To organise in any kind regularly study visits in Berlin's professional schools from the Egyptian side
- The potential is given it needs to lift the treasures

Capacity development of selected actors and organisational structures by vice-versa interchanges

- Establish regular interchanges and exchange study visits of actors from both sides
- Support of Egyptian entrepreneurs or investors on SME Level through establishing a connection to the Berlin Chamber of Crafts or concerned guilds
- Organising communication and interrelation between Egyptian crafts or SME companies and the Berlin Side
- Support economic relations between both sides from below through vice-versa study and meet each other on a personal level

Personal capability development in professional and pedagogical fields

- To establish here in the Campus El Gouna a regular lecture format to transfer knowledge from Germany to Egypt
- Realise it in different levels from a short term format up to blended learning of longer terms format
- Transfer of TU Berlin experiences in professional learning combined with engineering issues
- It could also be the format to transfer the knowledge of the professional school experts to give their experiences to the Egyptian audience

Outlook

In some words I've illustrated the potentials of Berlin TVET structures to support the Egyptian transformation process, but

- ❑ We need to start a such process of exchanges and we need the will to do it
- ❑ We need the financial and personal resources to develop the process
- ❑ We need to clarify the benefits of the process for both side

But I'm optimistic to start with and to continue with the process, 'cause the first steps are already done, we are sitting together and discuss.

Thank a lot for your attention
